

5 mm triple output led rgb

4-lead, red-green-blue LED. One common lead (anode) and one lead for each color. 5mm (T1 3/4). Water-clear in off-state.

Part Number: AL-L051RGBC

Clear 5mm tri-color LEDs with separate red, green and blue LED chips inside! Nice indicator, and fun to color-swirl. 45-60 degree viewing angle. We also have diffused RGB LEDs that they color mix inside instead of appearing as 3 distinct LEDs.

Package Dimensions

Unit: (mm)

Tolerance: ± 0.25 mm

These are Common-Anode type which means you connect one pin to 5V or so and then tie the other three legs to ground through a resistor. We carry and use common anode more than common cathode because multi-LED driver chips (such as the TLC5940/TLC5941) are often designed exclusively for common anode and can't be used with common cathode.

1000PCS MOQ Pack of 5mm clear RGB LEDs

Red: 630 nm wavelength, Green: 525 nm, Blue: 460 nm

Red: 1.8-2.4V Forward Voltage, at 20mA current, Green: 2.8-3.4V, Blue: 2.8-3.4V

Red: 1000-3000 mcd typical brightness, Green: 2000-4000 mcd, Blue: 1000-3000 mcd
